

I am against the proposal. Having such a facility is to be applauded, but not so close to residential areas.

An industrial refinery running 24/7 near a community is unacceptable.

- The sound levels carry at night wherein I already have a disability and am sound sensitive.
- Outsourcing quality control of inputs is indefensible. The operator needs to control the inputs to ensure there are no smell issues especially when so close by community areas.
- Residents will be able to smell emissions from the site, with only 170 tonnes out of 200 being able to be converted into fuel. We put up with the occasional smells from the Mugga Lane Tip but at least that is Govt monitored and I can, and have, pursued smell complaints and its been effectively managed. I don't have the same confidence, access nor recourse to a private operator. Again the residential non converted product that isn't converted into fuel will see the smell ending up coming up the kilometre or so where we live.
- I thought that was why Fyshwick was created for light industrial and Hume for light commercial.

Why is it that residents have to analyse, digest and respond to complex environmental reports that may or may not impact us. I would have thought our Govt would be there to protect us, and would be there to help assess these things, and determine the impact on residential rate payers, rather than be an enabling body for processing applications.

I can see our local MLA for Brindabella Andrew Wall has been involved, which is great, but I can also see what

appears to be verballing of his response (Canberra Times 30 Sep 16) ie., that differs from what he believed he said. Talk about confusion, how can we believe the proponent based on this alone?

Has any one asked the new (approved) Solar Farm on the other side of the road (that will help us get to 100% Green Energy by 2020), and what impact it will have on those acres and acres of panels they are still putting up. In this case the Govt has a direct interest in the outcome, has the owning Dept had an input into the environment impact of this proposal? That is, does the left hand know what the right hand's decisions and impacts are?

Yes its in an industrial park but we never for a moment envisaged the Govt would allow this type of industry. I recommend the Govt refund the purchase price and help the proponent select an area that is more appropriate as occurred with the Gas Turbine Plant.

Thanks to the Environment and Planning Directorate, and Canberra Times reporting, in approving and enabling (respectively) this extension. It was needed.

PS I'm not a nimby in this matter, maybe I am, but merely believe we need to be cautious with the assessment and get the support we need from Govt to better inform residential ratepayers of the accuracy of the alleged statements claimed by the proponent.
